

# Fundamentals of Cybersecurity

## **Brief Description :**

Learn the fundamentals of cybersecurity and the best practices that will keep you safe from cyber attacks both in the workplace and at home.

## **Detailed Overview**

This course is designed to increase your awareness of the threats you might be a target of when using a computer. You will learn the somewhat obscure vocabulary of the mysterious world of cyber security. Terms like "Ransomware", "Phishing attacks" or "Denial of Service" will no longer hold any secrets for you and you will be prepared to detect these threats before you become their next victim.

It also teaches you a wealth of simple best practices designed to increase your online security whether at work, at home or on the road.

This course is made of several self-paced modules followed by a 1-day instructor-led training and a small assignment that should take you no more than an hour to complete.

Thanks to this course, you will be able to mitigate most fraud attempts you might be a victim of which will make you a better online citizen.
